Objective

To secure a challenging role as a **Data Scientist or Python Backend Developer** in a reputed and innovation-driven organization where I can utilize my skills in **machine learning, data analysis, backend development, and scalable system design** to build intelligent, data-driven applications. I aim to contribute to impactful projects by developing predictive models, integrating ML solutions into production environments through robust REST APIs, and optimizing databases for performance and reliability. I am committed to continuous learning, solving complex real-world problems, and delivering high-quality technical solutions that support organizational growth and strategic decision-making.

Education

Lovely Professional University **Jalandhar, Punjab**
Bachelor of Technology in Computer Science and Engineering, CGPA: 7.5 *2023 – Present*
Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Operating Systems, Machine Learning, Computer Networks, Software Engineering

Genius Public School **Dausa, Rajasthan**
Senior Secondary School Certificate (12th Grade), Percentage: 89.5% *2023*
Key Subjects: Physics, Chemistry, Mathematics, Biology

Shekhawati Public School **Dausa, Rajasthan**
Secondary School Certificate (10th Grade), Percentage: 91% *2021*
Achievements: 1st Rank in Mathematics

Technical Skills

Programming Languages: Python, C++, Java, JavaScript
Web Technologies: HTML, CSS, Django, Flask
Tools/Platforms: Git, GitHub, Streamlit Cloud, Excel, Power BI, Tableau, Render
Data & ML: Pandas, NumPy, Matplotlib, Seaborn, sklearn, NLP
Databases: MySQL, MongoDB, SQLite

Projects

Project Title: *RoyalWheels – Full-Stack Vehicle Rental Platform*
Description: Developed a scalable full-stack vehicle rental platform enabling customers to book vehicles and vendors to manage inventory, bookings, revenue, and expenses through a secure dashboard.
Technologies Used: Python, Django, SQLite, REST APIs, HTML5, CSS3, JavaScript, SMTP, Fast2SMS
Impact/Achievements:

- Architected modular Django backend with normalized relational database schema and optimized ORM queries
- Implemented secure authentication system with role-based access control and Email/SMS OTP verification
- Developed dynamic booking engine with real-time availability control and double-booking prevention
- Built RESTful APIs and advanced admin dashboard for revenue tracking, expense aggregation, and profit computation
- Applied database optimization (select_related, prefetch_related, aggregation) and robust backend validation for system integrity

Demo/Code Link: https://github.com/mukundkhandelwal463/RoyalWheels

Project Title: *Road Accident Severity Prediction*
Description: Built a Machine Learning model to predict accident severity using classification techniques.
Technologies Used: Python, Random Forest, Pandas, NumPy, Streamlit
Impact/Achievements:

- Performed data preprocessing, feature encoding, and model training
- Used Random Forest Classifier for improved prediction accuracy
- Deployed model on Streamlit Cloud for real-time predictions
- Designed interactive UI for severity risk visualization

Demo/Code Link: https://github.com/mukundkhandelwal463/mukundkhandelwal463-Accident-Prediction-With-Pipeline/tree/main

Project Title: *AI-Powered Resume Analyzer & Job Recommendation Platform*
Description: Developed an end-to-end AI-powered backend system that automates resume parsing, ATS scoring, candidate classification, and job recommendation for both candidates and recruiters.
Technologies Used: Python, Flask, spaCy, Scikit-learn, MongoDB/MySQL, TF-IDF, Cosine Similarity
Impact/Achievements:

- Designed RESTful APIs using Flask for resume upload, parsing, ATS scoring, and job recommendations
- Built NLP-based resume processing pipeline (PDF/DOCX/TXT) using spaCy, Regex, TF-IDF, and cosine similarity
- Developed and evaluated classification models (SVM/Naive Bayes) for resume categorization
- Implemented skill-based job recommendation engine to match candidates with relevant roles
- Automated recruiter-side candidate ranking system to reduce manual screening effort

Demo/Code Link: https://github.com/mukundkhandelwal463/AI-powered-Resume-Screener

Project Title: *Netflix Data Analysis Dashboard*
Description: Analyzed Netflix dataset to identify content trends, top genres, and leading countries.
Technologies Used: Microsoft Excel, Power BI, Pivot Tables, Charts, Dashboard
Impact/Achievements:

- Cleaned and structured dataset
- Built interactive dashboard showing yearly trends and genre distribution
- Visualized KPIs like average ratings and content count per year

Demo/Code Link: https://github.com/mukundkhandelwal463/Netflix-Movies-Analysis-Dashbard

Certificate

Machine Learning & Data Science – Skill Up: GeeksforGeeks (Nation SkillUp) | 2026
Cloud Computing: NPTEL | 2025
Database Management System: Infosys | 2025
Responsive Web Design Certification: freeCodeCamp | 2024
Data Visualization: Empowering Business: Tata Forage | 2025
Data Structures and Algorithms: Online course by Apna college, completed in 2026.

Achievements

Patent: Published a patent on " Next-Gen Smart Inkless Pen: Revolutionizing Writing with AI"
